Programming Languages: AutoCAD supports a variety of programming languages. AutoLISP, a derivative of LISP, has been supported since release 1.0, and Visual LISP, a visual environment for AutoCAD LISP, was first included in release 1.5. VBA, Visual Basic for Applications, an add-on for AutoCAD that allows users to automate many procedures such as moving, resizing, deleting, drawing text, frames and more, is included in AutoCAD since release 8, and was also available for AutoCAD LT. AutoCAD has also included scripting in .NET and ObjectARX. AutoCAD's own built-in languages, such as AutoLISP, are used to create custom applications for AutoCAD. Since release 4.5, there is an ObjectARX command line interpreter called ARX, which enables script writing by embedding a scripting language interpreter and debugger. AutoCAD supports a variety of programming languages, from AutoLISP and Visual LISP to VBA and .NET. AutoLISP is a LISP dialect which was first supported in AutoCAD by release 1.0. AutoCAD supports Visual LISP since release 1.5. The VBA language is supported since release 8. AutoCAD supports Microsoft .NET Framework and ObjectARX since release 4.5. Command Line Interface AutoCAD includes the ability to create, edit, and output DWG files using the command line. The command line utility is used to write scripts that automate the setup and use of AutoCAD, or to automatically produce drawings (for example, specifying a drawing template and providing a list of objects to insert). Commands are not available to be run from within the GUI. The command line consists of three components: the command interpreter, command line (CL), and the Windows command shell. The command interpreter is an executable program that accepts text commands from the CL and returns output to the CL. Commands are described using the Command Box, where each command is assigned an action that is performed by pressing the ENTER key. Commands can be entered into the command box using the keyboard or by using the command bar which appears when the cursor is placed on a command in the Command Box. The command bar has the same commands as the keyboard command box but, by default, is not visible. It becomes visible on the keyboard command box and when in the command bar. The a1d647c40b
