Q: Find a value in a vector and replace it with another value I have a vector named conn. It contains entries like this: (4):conn=c(0.0,20.0) I want to know if there is a number in the vector for which I can set to a value of my choosing. I also want to know which element of the vector contains that number. For example, I want to find 10.00 in conn and set it to 10.0. The result should be: (4):conn=c(0.0,20.0) (4):(conn[1]==10.0) A: How about: > conn=c(0.0,10.0,20.0) > values=which(conn==10.0) > conn[values] conn [1] 0.0000 10.0000 20.0000 A: An alternative to which is find: values

Should it come to that, the only thing you can try is to restore your computer from installation media. It is advisable to make a backup of your data at least before you apply the recovery software. Recovery software commonly comes with three common types of recovery: the File System Recovery, the Disk Partition Recovery, and the Partition Recovery. Different types of software are used for these different types of recovery. The File System Recovery is mainly used to get all of your data back by accessing the Hard Disk and setting the file to their original state. The Disk Partition Recovery is usually used to get back the files from a crashed hard disk. The Partition Recovery is used to get back those files that are spread over multiple partitions. Most types of recovery software aim at recovering your data. On
