Piggy is a simple-to-use software utility which bundles only basic options for managing your financial budget every month. It does not include complex features or configuration settings. Swift setup and user-friendly GUI Installing the tool takes minimal time and effort. However, you can modify the default location for storing the plan files if necessary. As for the interface, Piggy keeps it plain and simple, going for a regular window with a clean layout. Add new entries and evaluate your budget easily In order to add a new entry to the list, all you have to do is specify the day of the month, mark it as income or outcome, set a money amount, and write a description. The main frame shows the day, income and outcome, description, along with balance (which is automatically added or reduced from the previous amount). Save plans, manage entries, configure app settings Plans can be saved to any part of the hard disk by specifying the file name, directory and format (MPL, XML or CSV ASCII or UTF-8). Entries can be edited, removed from the plan, as well as made inactive. It is possible to modify font properties (type, style, size, script) and the default documents path, show decimal places and a summary, alter the amount format, hide the toolbar, customize colors, and set a background image. Preferences can be exported to file and imported at a later time or on another PC running Piggy, and it is also possible to reset the window size and position to default. Evaluation and conclusion The tool does not put a strain on PC performance, since it runs on low CPU and RAM. There were no issues in our tests, since it did not hang, crash or pop up error messages. It is not particularly resourceful, but Piggy offers a simple solution for managing budgets using basic tools, and it can be handled by casual users with ease. Engine is the easiest way to run, develop, and test your HTML5 applications. It doesn't use Flash, and it won't require a big download or install. It's a true open source solution, as the code is open to everyone. It's free to use. Engine features HTML5 CSS and JavaScript editor, and automatic HTML5 validation. It uses a web server and a code compiler, it does not depend on a web browser, and it runs in multiple operating systems. It supports multiple browsers (Safari, Firefox, Chrome, Opera), devices (desktop, laptop, mobile

- Text Macro from keyboard or Clipboard - Automatically selects the words, phrases or sentences to use as a search - Uses your search term as your macro keyword - Finds all of the search terms on a page with ease - Blocks Web pages from copying the search terms - Works with any browser - Gives you complete control of your text - Many search queries are not sensitive to capitalization. - Your search term, not its capitalization, will be copied, making your keystrokes searchable - Simply copy the text in any box and paste it into the box at the bottom - Use the result list to easily locate any searched word - Print and email keystroke information for tracking and eliminating errors - Gives you complete control of your text - Blocks Web pages from copying the search terms - Blocks Web pages from pasting your search terms - Works with any browser - Gives you complete control of your text - Many search queries are not sensitive to capitalization. - Your search term, not its capitalization, will be copied, making your keystrokes searchable - Simply copy the text in any box and paste it into the box at the bottom - Use the result list to easily locate any searched word - Print and email keystroke information for tracking and eliminating errors Key Macro Features: - Automatically selects the words, phrases or sentences to use as

a search - Works with any browser - Gives you complete control of your text - Blocks Web pages from copying the search terms - Blocks Web pages from pasting your search terms - Works with any browser - Gives you complete control of your text - Many search queries are not sensitive to capitalization. - Your search term, not its capitalization, will be copied, making your keystrokes searchable - Simply copy the text in any box and paste it into the box at the bottom - Use the result list to easily locate any searched word - Print and email keystroke information for tracking and eliminating errors - Gives you complete control of your text - Blocks Web pages from copying the search terms - Blocks Web pages from pasting your search terms

What to Do: - Open the web page in a browser window - Copy the text to the clipboard - Go to Key Macro and select it - Use the first search box to copy your search term - Find the result box and paste your search term 1d6a3396d6

Piggy is a freeware budget management tool developed by Mister Gadget. It can be used as a simple budgeting tool to track the expenses on a monthly basis. The tool features a user-friendly interface, which allows you to manage your budget in simple steps. With the software, you can track the expenses for the whole month and budget for each day of the month. You can quickly add new entries to the plan with the entry option. Piggy also offers a full help section that guides you through all the features of the program. Piggy Key Features: 1. Budget Planner. 2. Manage Entries. 3. Customize. 4. Currency. 5. Categories. 6. Data Entry. 7. Show Balance. 8. Add. 9. File Export. 10. Preferences.
