Despite its age, AutoCAD remains a popular CAD application. Autodesk reports that users of its AutoCAD software today include "professional designers, engineers, architects, contractors, and hobbyists." At the start of 2016, Autodesk estimated that the total number of users of AutoCAD's desktop version had exceeded one million (compared with approximately one million users of AutoCAD LT in 2012). About 40,000 new users of the desktop version have joined AutoCAD every month since 2010, according to Autodesk. As of early 2019, Autodesk also reported that the number of mobile app users had reached over seven million, compared with six million users of AutoCAD LT. AutoCAD History Autodesk claims that AutoCAD's users represent a vast majority of engineers and architects in the world, and that in 2014 approximately 90% of the software engineers in the United States used the product. AutoCAD remains in widespread use. "The number of AutoCAD users worldwide now exceeds 10 million. The number of desktop users has surpassed one million. This success is due to the ability of AutoCAD to adapt with a changing and increasingly complex world. AutoCAD is a mainstay for design work," stated David Handley, senior vice president of worldwide sales for Autodesk, in a 2018 blog post on the company's website. "Over the past 25 years, AutoCAD has helped to support the design and construction of a wide variety of high-quality buildings, including libraries, airports, courthouses, space centers, hospitals, hotels, schools, universities, sports venues, hotels, homes, offices, stores, retail centers, industrial facilities, theaters, roads, bridges, stadiums, and airports. The majority of the world's current skyscrapers and major new buildings were designed using AutoCAD." The Autodesk AutoCAD software application is a commercial design tool used to create and modify 2D and 3D drawings, which are used to design and construct buildings. Autodesk also offers AutoCAD LT (Autodesk LT, or LT for short) for small-to-medium projects, as well as AutoCAD LT 2018 (AutoCAD LT 2018, or LT for short) for beginners. The most recent version of AutoCAD LT is version 13. AutoCAD versions prior to 2012 were marketed as part of the Aut

Data types The Data Interchange Format (DXF) and related drawings exchange formats are a standard for exchanging technical drawing information. Each field of the standard format is coded with a unique code. These codes are used to represent the type of the

field. Autodesk extended the definition of the standard format with special codes used for working with shape and arc objects, for the description of labels and for descriptions of parameters in other fields. The "x" in the field codes indicates whether the field is "extended" or "standard". The "t" in the field codes indicates the shape of the field. The "a" in the field codes indicates whether the field describes parameters or attributes. The "g" in the field codes indicates whether the field is used for grouping lines or shapes. The "r" in the field codes indicates whether the field is read-only or read-write. The "o" in the field codes indicates whether the field is a view parameter or an annotation parameter. The "d" in the field codes indicates whether the field is read-only or read-write. The "v" in the field codes indicates whether the field is used as a vertex in a polyline or whether it is a vertex in a polygon. The "s" in the field codes indicates the type of the field. The "s" codes are used for all text-only fields. The codes are used in both standard and extended formats. The "e" in the field codes indicates whether the field represents a single field of text data, an expression or an array. The "p" in the field codes indicates whether the field is a "parameter" or "property". The "c" in the field codes indicates the type of the field. The "b" in the field codes indicates whether the field is a blank field, an array of blanks or an expression. Autodesk Exchange Apps add-on applications are available on the Autodesk Exchange App Store. The Autodesk Exchange App Store was announced in 2014. In 2019 Autodesk announced the end of this program. Applications Autodesk is a dominant player in the digital fabrication market. Its PowerTrace Studio, a free set of tools used for describing and optimizing CAD files and supporting collaboration between multiple users on a single CAD file, are used as a base ca3bfb1094

Toronado The Toronado was the last automobile designed and built in the United States by A. J. C. ("A.J.") Stevens. The company was in business from 1915 until 1917 when A. J. C. Stevens died. A.J. Stevens had been the designer of the Stevens carriage and automobile company since 1906. The Stevens car was a sports car using the overhead valve engine and steel chassis. The factory building was moved to Oshkosh, Wisconsin in 1922 where it was renamed the Oshkosh Motor Company. The Toronado was the most expensive car built by the Stevens company, costing \$3,300. The Toronado was powered by a engine which produced up to (due to its overhead camshaft, the result was only). The engine was a single overhead camshaft on a rectangular engine block with push rod actuated valves. The Toronado had a top speed of and a of acceleration. The Toronado's light weight (3,000 lbs) and engine helped it out accelerate the Phaeton which was longer, heavier and had a larger engine. Despite the very high top speed the steering was slow. Production The Stevens company produced only three Toronados for the 1916 model year. Toronados were not particularly popular vehicles with the public and only 210 were sold. Stevens company president, William P. Noyes, declared that the Toronado was to be the last car made in the United States by A. J. C. Stevens. Although the car was an expensive failure, Stevens' name was attached to a respected pedigree of cars and he received enough recognition
