As is known, photovoltaic devices, such as solar cells, can be used to provide power to a variety of loads. For example, solar cells have been used to power electronic devices, such as cellular telephones and other wireless communication devices. Such solar cells may include a plurality of photovoltaic layers to absorb light and generate voltage in the device. Solar cells can also be used to power other electronic devices, such as storage batteries. FIG. 1 shows an example of an electrical system that can use a solar cell for this purpose, and an exemplary configuration of a solar cell that can be used to power such a system is shown in FIG. 2.
