Photoshop can be used as an image-altering tool, as well as, graphic design program. Even if you don't have any knowledge of Photoshop, it's possible Love Apple's products but Apple products are not perfect. The official support for AIFF files is a big one for me. I tried this file type prior to AIFF and learned a few things that I had never known before. The best thing is that it opens on the Mac, Windows, and iOS without needing additional software.

A few of the things I've learned:

1) The AIFF file type was the same as the RAW type. Only difference is the extension. AIFF was preferred for most reasons, except that the file size was smaller than RAW and apparently more compatible than RAW. So Apple allows you to open on any device. You can save AIFF if you want to. Your final decisions will be determined by the image quality.

2) You can tell if an image has been opened previously. It's changed around back to the file name. For example, an image of the Capitol may have been opened many times. That's not an issue with RAW files, and it is irrelevant for you if you're going to export. It will finish the file correctly. It will not alter the original file, or put a flag on it.

3) AIFF isn't compression. This will be obvious if you download it e.g. from a stock photo site, and find it has a different file type and size than what you had downloaded. It's because the software picked up a different compression type either because it had guessed wrong, the stock photo site sent an altered file, or you simply selected another image to upload.

4) In the software, you can see and set settings for ALPHABETICS, DYNAMICS, COLORS, SHADING, and SIZE if the image is tagged properly – so you can even get an idea of the original image density.

5) You can zoom to the actual pixel value. If the photo you upload is at 100%, 100% is not actually 100%. If you have a photo from your D3 camera at 100%, you are not getting the best quality. Try the program at 100% of the original image's pixel size.

6) You can set the resolution for the image when you upload it. Otherwise your uploaded image is 70% the original quality. I recommend this for final images. If it's an example or possibly for a small part of an image, 70% was fine. BUT send 1000 AIFF images of the Capitol and your Mac will slow down. Bummer.
