Other than what I ran on my iPad Pro, I also pulled out my old laptop to see how the new version works with older version of Photoshop. I used Aero and Windows 7, turned off the pen, made sure the cursor's hotspot was on, and still got decent performance. In fact, it was rather impressive. Because I thought the results were good, I decided to make two more copies of the test chart. One version was opened in Photoshop CS6 and the other one was in Photoshop CC 2017. I used the same settings throughout: 60x60 pixels, 16-bit color, sRGB, and activated the Pencil. I also checked a similar chart made with Photoshop CC 2015. PS Sketch ups the ante. Where you draw is as important as where you paint. I picked my favorite part of the board and started drawing. This resulted in the image to the right. As you can see, the pen works well, both on the iPad Pro and on the desktop. As you can see in the example to the right, Photoshop continued using the Pencil's movement to properly blend colors. There were a few exceptions, but, overall, I was not at all disappointed. It does lag a bit when you're drawing very thick lines and it's very noticeable when drawing tiny lines. Otherwise, it works really well, catching small shapes with ease. Compared to the CS6 version I made , the Adobe Sketch version was better in almost all areas. There was a bit of stuttering when making quick changes to a single line when using a Surface Pen, which didn't seem to happen with any other pen. This is also evident when you use the original Windows 7 version of Photoshop CS6, which also has stuttering problems with the Surface Pen.
