In this paper, we present a theoretical study on the structure and stability of n-sulfoxane (n=12-20) clusters. A global optimization method, genetic algorithm, has been used to optimize the geometrical structures and vibrational frequencies of the clusters. It is found that the global minimum structure of n-sulfoxane clusters is (n-1)S-nO-S (n=12-20) and the local minimum structures of n-sulfoxane clusters are (n-1)S-nO-S, (n-1)S-nO-O-S, (n-2)S-nO-S-S, (n-2)S-nO-O-O-S, and (n-2)S-nO-O-O-O-S (n=12-20). The C2S2O4S2 is the global minimum except for the case n=12. In addition, the theoretical results show that the C2S2O4S2 clusters are more stable than the clusters with (n-1)S-nO-S and (n-1)S-nO-O-S structures. The electron density isosurface and the electron density difference (EDD) are also calculated and discussed in detail.Q: Question about Mathematica and Wolfram Alpha Im trying to learn Wolfram Alpha, I have actually done Mathematica for a college course.

Reviewees **give us nice, honest feedback** about their experience with a particular product. Sometimes, people are too busy to write a whole review, so they'll give feedback in the comments of an evaluation form. In other cases, they'll answer a few simple questions on web-based code they're sent. The great thing about feedback is that it gives us insights that reviewers aren't always comfortable sharing in reviews.

When it comes to RAM, again, if you are able to buy more than do so. RAM is what allows your computer to handle multiple tasks at once. When working as a designer or digital artist, using multiple Adobe applications at the same time can become a very normal practice. Adobe applications can be very taxing on any computer and more RAM helps to complete those tasks quickly. Having more RAM connected to your processor will ensure you have a highly optimized powerhouse computer to handle any and all Photoshop tasks. Ever since I was able to afford my own computer, I never purchased a computer with less than 16GB of RAM. Most computers nowadays come with at least 8GB of RAM which is sufficient. The one nice thing about RAM unlike a processor is that you can replace the RAM and add more after purchasing it. However, make sure to check this as again, companies like Apple have made it impossible to replace the RAM in their computers. It is always worth double checking!
