Importing images in Lightroom 5 is as flawless as it's 2014 predecessor. I experienced no issues with copyright or other concerns that I recall in previous versions, and most importantly, very quickly and without a hassle. For many photographers, this will be the ultimate reason to drop the subscription model and go proprietary. The free trial periods may also be reduced in the future, as this is something to keep one's eyes on from a subscription perspective. As mentioned, the app is quite powerful in that the integration with the vector illustration tools is a very welcome improvement. I may be biased here, but I am not a fan of the vector illustration tools of the DxO suite because they lack some necessary tools such as the ability to scale an image by a very specific amount. The latter rather wished the tool had the ability to overlay a selection on an image rather than having to define it yourself. For the most part, however, the new tools work pretty much the same way. The iPad Pro, Apple Pencil, and Bamboo stylus work like a charm to create and edit vector illustrations. Taking advantage of the multi-touch capabilities of the iPad Pro is also a plus. The editing aspect is still handled through a now familiar interface. You can choose to quickly edit the desktop, utilizing all the tools that are now on the tablet interface. You can also quickly access the editing features by tapping on a specific area of an image. Either way is fine, and there is no need to switch between the desktop and the tablet. You can work with one image at a time, arranging tools in the same way as on the desktop. The tablet interface has the ability to scale the entire interface down or magnify individual images by 50% or 100%, which is very nice. Click through the tabs and you will switch to the desktop, which is pretty much how it worked in previous versions.

Due to this, I have never felt advertisement or forced to update when a new update comes out. They always make it very easy to install the updates.
